PRESS RELEASE

Leonardo at Expodefensa 2017: presenting leading integrated systems to meet Colombia's naval, air, land and cyber challenges

- A virtual tour will enable visitors to Leonardo's stand to experience the latest products and technologies in different operational scenarios, such as maritime, battlefield and air defence
- Its participation in Expodefensa reaffirms Leonardo's role in the South America region as a partner able to offer comprehensive and integrated solutions
- With over 30 years of experience in providing information assurance and cyber security solutions to private and public organizations, Leonardo is able to face the growing security needs of Colombia

Rome, 1st December 2017 – Leonardo will exhibit at Expodefensa 2017 (4-6 December, Corferias Exhibition Center, Bogotá) to present its comprehensive portfolio of products and systems for land, naval and air domains.

Visitors to Leonardo's stand (3358, Hall 11-16) at Expodefensa will be able to explore the latest generation of sensors and systems on the bridge of a multi-role naval vessel as well as in a battlefield or air defence scenario, through augmented reality. A notable system that could be experienced is NA-30S Mk2, the new generation Fire Control System (FCS) designed to control up to three modern guns against conventional and asymmetric air/surface threats. Also on display is KRONOS® NAVAL, a multifunctional radar based on advanced Active Electronically Scanned Array (AESA) technology, suitable for naval vessels of 400 tons and above.

DART and Vulcano guided ammunition will also be showcased. Both ammunition can be integrated into the company's successful 76/62 mm medium caliber naval gun. Also on display is the ATAS (Active Towed Array Sonar), the first in class towed active sonar for modern vessels operating in shallow and blue waters.

In avionics, an interactive display on the stand will give visitors the opportunity to find out about Leonardo's ISTAR (Intelligence, Surveillance, Target Acquisition and Reconnaissance) capabilities, including airborne radar solutions, Electronic Warfare systems and Identification Friend or Foe (IFF) equipment. Notable in this domain is the Falco Evo unmanned aerial vehicle, a system that can carry multiple sensors to provide persistent surveillance.

Particularly relevant for the region is the new Fighter Attack (FA) version of the M-346, able to satisfy various air force requirements with a short lead time. In the helicopter segment, Leonardo is promoting its AW139, the benchmark for safety, performance and efficiency in challenging multi-role operations all over the world.

Leonardo is also able to meet the growing needs of security in Colombia, leveraging its extensive experience in providing information assurance and cyber security solutions to private and public organizations for over 30 years, including the defence ministries of Italy and the United Kingdom.

Leonardo is among the top ten global players in Aerospace, Defence and Security and Italy's main industrial company. As a single entity from January 2016, organised into seven business divisions (Helicopters; Aircraft; Aero-structures; Airborne & Space Systems; Land & Naval Defence Electronics; Defence Systems; Security & Information Systems), Leonardo operates in the most competitive international markets by leveraging its areas of technology and product leadership. Listed on the Milan Stock Exchange (LDO), in 2016 Leonardo recorded consolidated revenues of 12 billion Euros and has a significant industrial presence in Italy, the UK, the U.S. and Poland.
